SUMMARY

I am a Senior Software Engineer with **10+ years** of experience architecting systems using **Node.js** and **Laravel**, specialising in backend development, cloud infrastructure and DevOps automation. Proven track record in various engineering roles for clients across industries like fintech, healthtech, and regulatory compliance. I turn complex requirements into **maintainable, high-performance systems** through strategic architecture, clean code, automated testing and resilient deployments - paired with good documentation and mentorship. A core focus is ensuring technical outcomes directly align with business needs. Public projects reflect my commitment to innovation and continuous learning. Seeking **fast-paced environments** leveraging modern stacks and agile practices to solve high-impact problems—whether collaborating within teams or driving solo initiatives.

SKILLS

Languages

Javascript Typescript Node.js
PHP Solidity bash

Backend

Laravel Express Loopback
Serverless Hardhat

Frontend

React VueJS Angular

Cloud & DevOps

AWS GCP Terraform CI/CD
Github Actions Vercel Docker

Databases

MySQL PostgreSQL
MongoDB AuroraDB
DynamoDB Redis SQLite

Architecture & Design

Microservices Serverless
Event-driven Monolith MVC
SOLID

Testing

PHPUnit TDD Unit Testing
Integration Testing

Standards

REST OpenAPI JWT
OWASP Top 10

Methodologies

Agile Scrum Kanban

WORK EXPERIENCE (6)

Aug 2018 - Current

Contractor Software Engineer at [Casa4 - own LTD \(London, UK\)](#)

Provided contractor services through my own LTD, Casa4, in between other roles. The following is a list of the most notable projects, specialising in Laravel and Node.js. Involved both in team-based development and solo application building from design to deployment and maintenance.

- **ElectroRent** (*Laravel, MySQL, SQLite, Bash*)

As a **Backend Engineer**, I enhanced application performance by optimizing critical API areas and expanded functionality by designing and implementing new endpoints for key business features.

- **Aliat Optic** (*Node.js, Serverless Framework, Lambda, DynamoDB, AWS, MySQL, Laravel, DigitalOcean*)

As a **Solution Architect**, I designed and built a serverless invoicing application that operated reliably in production for over 3 years with minimal maintenance, processing external FTP data via AWS Lambda and DynamoDB.

- **Hurlingham Club** (*Laravel, Laravel Forge, Laravel Envoyer, MySQL, AWS, Docker*)

As a **Backend and DevOps Engineer**, I orchestrated the migration of a major application to the client's own AWS infrastructure. This involved a full technology upgrade from PHP 5.5 to 8.1, provisioning new infrastructure, and establishing a modern CI/CD pipeline, ensuring zero data loss. Throughout the project, I created and presented diagrams to stakeholders to communicate the process and progress at each stage.

- **TicketTailor** (*PHP, MySQL, SQLite*)

As a **Backend Engineer** I worked on the API of the second largest ticketing application in Europe. Designed and implemented a testing framework using PHPUnit to automatically scan OpenAPI specs and validate each API endpoint, including all new additions. This significantly improved deployment times combined with strategically assigning tests to the appropriate level (unit, integration, acceptance). Also contributed by adding numerous endpoints to the client-facing API.

Mar 2021 - Sep 2024

Fractional CTO at Artetra (remote)

Translated business requirements into actionable project features and oversaw application architecture.

- Led the development and launch of the MVP, leveraging a team of part-time contractors and very limited resources.
- Designed and managed a technology ecosystem comprising a backend Express API integrated with blockchain smart contracts (Solidity), and a React frontend with 3D components (ThreeJS).
- Led a team of 3-4 developers, providing technical guidance, managing the product backlog, and supervising deployments to AWS infrastructure using Docker to ensure robust and scalable operations.
- ↪ Technologies: Node.js, React, ThreeJS, Solidity, Hardhat, Express, Postgres, MongoDB, AWS, Docker

Oct 2019 - Sep 2022

Software Engineer at [True Compliance \(London, UK\)](#)

Contributed to the development of a cloud-based compliance management system, enhancing compliance tracking and reporting capabilities.

- Architected and developed the core API and serverless infrastructure, establishing a robust and scalable foundation for all system operations.
- Built a suite of internal tools, including a Vue.js reporting application for non-technical stakeholders and Laravel Nova dashboards for system monitoring, significantly improving data accessibility and operational oversight.
- Also built a bespoke real-time caching system that stores processed relational MySQL data into a MongoDB database controlled and accessed by a serverless API. The purpose is to vastly increase the speed for final users down to near instant results and reduce the load on the main database.
- ↪ Technologies: Laravel, Laravel Nova, Laravel Vapor, AWS, SQS, VueJS, Node.js, Serverless Framework, Lambda, CLI, Bash

Nov 2018 - Oct 2019

Software Engineer at [Skin Analytics \(London, UK\)](#)

Designed and developed main applications and maintained AWS infrastructure, contributing to the company's mission of improving skin health.

- Engineered and led the seamless migration from NoSQL (CouchDB) to a relational database (MySQL), achieving an 11x performance increase with zero downtime or impact on the user experience. The process involved creating custom migration scripts, data normalization, and rigorous consistency checks.
- ↪ Technologies: Node.js, Express.js, TypeScript, CouchDB, AWS, Loopback, pm2, Angular

Feb 2017 - Nov 2018

Application Developer / Dev-Ops at [Wooba \(London, UK\)](#)

Sole Backend Engineer responsible for designing, developing, and supporting client applications, driving business growth.

- Designed, built, and maintained multiple large-scale applications, including a nationwide educational platform serving thousands of users and a comprehensive financial management tool, using Laravel and Vue.js.
- Established a comprehensive CI/CD pipeline using Laravel Forge for DigitalOcean infrastructure, which significantly accelerated deployment cycles and improved application reliability.
- ↪ Technologies: Laravel, DigitalOcean, Laravel Forge, MySQL, VueJS

Jan 2014 - Feb 2017

PHP Application Developer at iQU Group (Amsterdam, NL)

Marketing solutions for game developers.

- Developed and maintained a variety of marketing applications using vanilla PHP and Symfony, delivering new features and resolving bugs.
- Key contributions included implementing scalable APIs, building reusable libraries to enhance team productivity, and creating an internal client with AngularJS
- ↪ Technologies: PHP, Laravel, Symfony, API, MySQL, Git, Docker, CLI, PHPUnit, AngularJS, Java

PROJECTS (5)

Recspenses

🔗 <https://www.github.com/iosifv/recspenses/>

A production-ready financial web application to calculate recurring monthly expenses. Initially started as a training project to practice my full-stack skills. Features include: a simple UI, multi-currency support including cryptocurrencies and an intuitive tagging system for expense labelling.

I used the "T3 Stack" which is a web development stack focused on simplicity, modularity, and full-stack typesafety. The full technology list is: *NextJS, tRPC, TypeScript, Node.js, Clerk, Drizzle ORM, PostgreSQL, Tailwind CSS, Vercel, GHA*

CLI Path

🔗 <https://iosifv.github.io/cli-path/>

Created a CLI tool to check Google Maps API directions, with saved locations, authentication, and a custom serverless API layer to simplify token management - built for training, touching multiple technologies: *Node.js, Serverless Framework, AWS, Auth0, OpenAPI, VHS, npm, GHA*

Casa4 website

🔗 <https://casa4.co.uk/>

An overengineered personal website built for learning purposes. Themed with *Hugo*, built with *Terraform* and *Cloudfront*, deployed to *AWS S3* with *Github Actions*.

T3 (Terminal Toolbelt Two)

🔗 <https://www.github.com/iosifv/t3/>

Inspired by the naming of Amazon's S3, I built T3 to resemble a framework for improving a terminal user's experience. Features include: an install script, platform selection (osx, ubuntu) specific scripts as well as agnostic ones, multi-machine installs. The interface is powered by *charmbracelet/gum*, a Terminal UI framework written in Go.

Hidden Hash (Cluj-Napoca, RO)

Personal business dealing with mining cryptocurrencies. Worked on Business model, legal compliance, hardware setup, software & security optimization/tweaks/updates, Performance fine tuning with various Bash, Batch or PowerShell scripts.

EDUCATION (2)

2010 - 2012

Masters Management and Business Engineering at Technical University of Cluj-Napoca

Operations Management

Business Analytics

Marketing Fundamentals

Human Resource Management

Operations Management

2004 - 2009

Bachelor of Engineering Computer Science at Technical University of Cluj-Napoca

Object-oriented programming

Data Structures and Algorithms

Advanced Databases

Computer Networks

C++

Java

.NET

SQL

Lisp

Prolog

Xilinx

Assembly

x86 processor

Electronics

Physics

Mathematics

INTERESTS

Hobbies

Motorcycles

Photography

Chess

HiFi Audio

Boxing
